

V3 Commercial Operational Desk Manual

Standard Operating Procedure (SOP): 2-Hour (8-Quarter) Forward Intraday Dispatch under Strict T-2h Gate Closure

Market & Asset Class: Danish Imbalance Trading (DK1 / DK2)	Execution Horizon: 96 Quarters (Full 24-Hour Day D)
Dispatch Cadence: 2-Hour Batches (8 Quarters / Batch)	Gate Closure Rule: T - 2 Hours Prior to Delivery Block
Source Dashboard: Port 5001 (V3 Optimeering)	Audit Platform: Shared Client Google Sheet (Immutable Version History)

1. Executive Summary & Core Dispatch Architecture

This Standard Operating Procedure outlines the operational workflow for providing forward intraday trading decisions to client dispatch desks in **2-hour discrete blocks (8 quarters per batch)**. To satisfy utility operational constraints, all trade orders (direction, volume, and spread targets) are frozen and transmitted **exactly 2 hours prior to the physical delivery block (T-2h)**. Because the V3 machine learning engine generates point-in-time quantile predictions across all 96 forward quarters dynamically, **zero code changes, retraining, or model modifications are required**. This document governs the manual transmission protocol via Google Sheets.

THE GOLDEN RULE OF T-2H GATE CLOSURE:

For any 2-hour delivery block starting at hour **T_start**, the predictions and committed trade decisions for all 8 quarters must be pasted into the shared Google Sheet **at or before T_start - 2 Hours**. Once posted, Pre-Trade signals must NEVER be modified.

2. Master 24-Hour Dispatch Timetable (All 96 Quarters / 12 Batches)

The 24-hour trading day is divided into 12 discrete 2-hour delivery batches. Each batch consists of 8 consecutive 15-minute quarters:

Batch #	Quarters	Physical Delivery Window	Send Deadline (T-2h)	Input Cutoff	Operator Action
Batch 1	Q1 - Q8	00:00 - 02:00	22:00 (Evening D-1)	21:45 (D-1)	Post Q1-Q8 signals to Sheet
Batch 2	Q9 - Q16	02:00 - 04:00	00:00 (Midnight)	23:45 (D-1)	Post Q9-Q16 signals to Sheet
Batch 3	Q17 - Q24	04:00 - 06:00	02:00 (Early AM)	01:45 (Day D)	Post Q17-Q24 signals to Sheet
Batch 4	Q25 - Q32	06:00 - 08:00	04:00 (Early AM)	03:45 (Day D)	Post Q25-Q32 signals to Sheet
Batch 5	Q33 - Q40	08:00 - 10:00	06:00 (Morning)	05:45 (Day D)	Post Q33-Q40 signals to Sheet
Batch 6	Q41 - Q48	10:00 - 12:00	08:00 (Morning)	07:45 (Day D)	Post Q41-Q48; Reconcile B1-B3
Batch 7	Q49 - Q56	12:00 - 14:00	10:00 (Midday)	09:45 (Day D)	Post Q49-Q56; Reconcile B4
Batch 8	Q57 - Q64	14:00 - 16:00	12:00 (Noon)	11:45 (Day D)	Post Q57-Q64; Reconcile B5
Batch 9	Q65 - Q72	16:00 - 18:00	14:00 (Afternoon)	13:45 (Day D)	Post Q65-Q72; Reconcile B6
Batch 10	Q73 - Q80	18:00 - 20:00	16:00 (Evening)	15:45 (Day D)	Post Q73-Q80; Reconcile B7
Batch 11	Q81 - Q88	20:00 - 22:00	18:00 (Evening)	17:45 (Day D)	Post Q81-Q88; Reconcile B8
Batch 12	Q89 - Q96	22:00 - 24:00	20:00 (Night)	19:45 (Day D)	Post Q89-Q96; Reconcile B9-B10

3. Step-by-Step Operator Action Manual

Follow this precise 4-step sequence at each 2-hour dispatch milestone:

Step 1: Open V3 Trade Ledger on Port 5001

Navigate to <http://127.0.0.1:5001/>. Ensure the price area is set to the client bidding zone (**DK1** or **DK2**) and market mode is set to **Continuous Intraday (D-0 Rolling)**. Click **Trade Ledger** on the winning model architecture (e.g. *Transformer-TFT* or *Hierarchical-LGBM+XGB*).

Step 2: Locate the 8 Target Quarters

Identify the 8 rows corresponding to the target delivery block. For example, if it is **06:00 AM**, locate **Q33 to Q40 (08:00 to 10:00)**.

Step 3: Extract and Paste Pre-Trade Orders (Section A)

Copy the 6 pre-trade order columns: **Quarter, Time (DK), Day-Ahead Spot (EUR), Model Pred Imbalance (EUR), Trading Decision, and Sized Volume (MWh)**. Paste these rows into **Section A** of the shared Google Sheet. *Do this at least 5 minutes before the T-2h deadline.*

Step 4: Post-Delivery Settlement Reconciliation (Section B)

After the delivery window has concluded (e.g. at 10:45 AM for the 08:00-10:00 block), Energinet publishes the official *ImbalancePrice* dataset. Re-open the V3 Trade Ledger, copy the newly populated **Actual Settled (EUR), Settlement Cash Flow, Roundtrip Fees (EUR), and Realized Net PnL (EUR)**, and paste them into **Section B** of the client Google Sheet.

4. Shared Google Sheet Template Design & Audit Separation

To maintain strict zero-leakage credibility, the client Google Sheet must be structured with two clearly separated halves:

Qtr	Time (DK)	Spot (EUR)	Pred Imb	Decision	Vol	Settled	Fees	Net PnL	Status
Q33	08:00-08:15	148.93	147.21	HOLD	--	180.50	--	+0.00	Settled
Q34	08:15-08:30	127.50	125.63	HOLD	--	192.10	--	+0.00	Settled
Q35	08:30-08:45	116.08	118.99	BUY Spot	3.0 MWh	145.80	-1.53	+87.63	Settled
Q36	08:45-09:00	195.67	198.84	BUY Spot	3.0 MWh	220.40	-1.53	+72.66	Settled
Q37	09:00-09:15	215.99	216.98	HOLD	--	215.00	--	+0.00	Settled
Q38	09:15-09:30	195.01	197.90	BUY Spot	3.0 MWh	230.10	-1.53	+103.74	Settled
Q39	09:30-09:45	173.79	176.57	BUY Spot	3.0 MWh	210.00	-1.53	+107.10	Settled
Q40	09:45-10:00	155.09	157.82	BUY Spot	3.0 MWh	190.50	-1.53	+104.70	Settled

5. Immutable Audit Verification via Google Version History

Google Sheets automatically creates an **immutable, server-side timestamped Version History** for every cell edit. This provides undeniable mathematical proof of compliance:

- When you paste Section A at **05:55 AM**, Google records an unalterable timestamp showing the trade orders were placed 2h 5m ahead of delivery.
- When you fill Section B at **10:45 AM**, Google records the secondary reconciliation timestamp.
- This completely eliminates any possibility of client disputes regarding retroactive hindsight mutation.
